LAYOUT

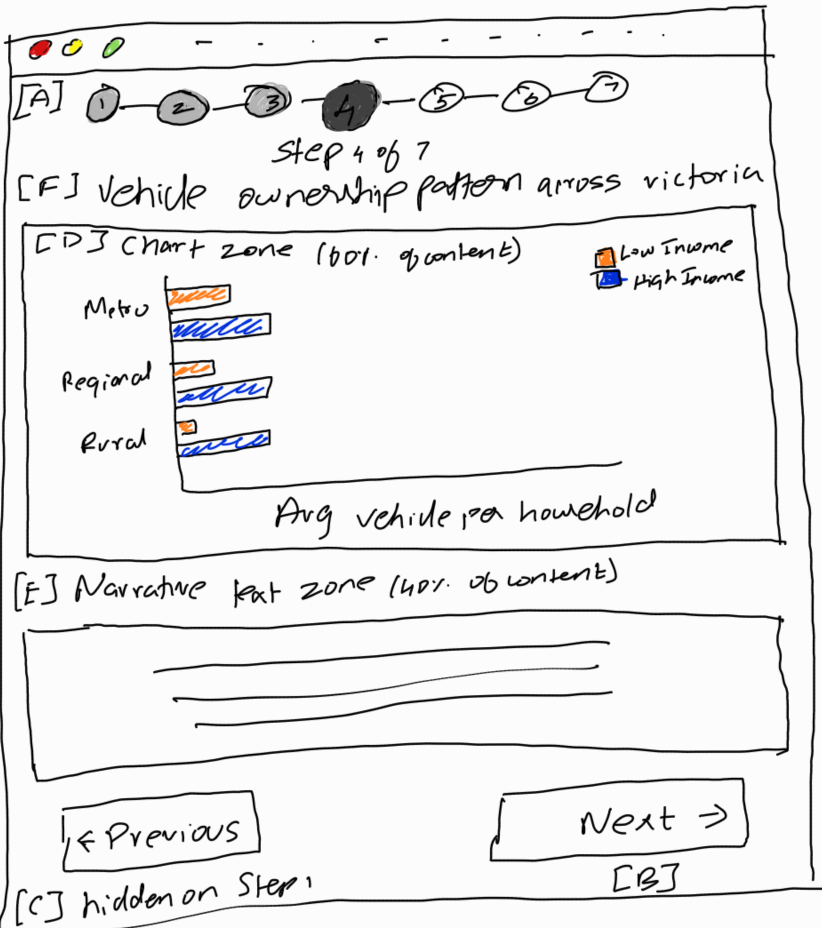
Title - Design A - Sequential Stepper

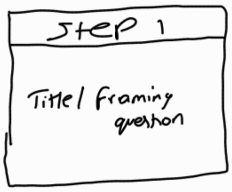
Author - Bharath Arun Gandhimani

Date - 12/05/2028

Sheet No - Sheet #2

Description - Interactive narrative visualization communicating findings about educational infrastructure investment socioeconomic equity & household travel behaviour in Victoria to policymakers & transport planners.





Hover tooltip [D] shows exact values only within step interaction.

Step circle states.

- Visited
- active
- Locked.

Label Reference

[A] - Step Indicator
[B] - Next Button
[C] - Previous Button
[D] - Chart Zone
[E] - Narrative Text
[F] - Step Heading

Components / operations

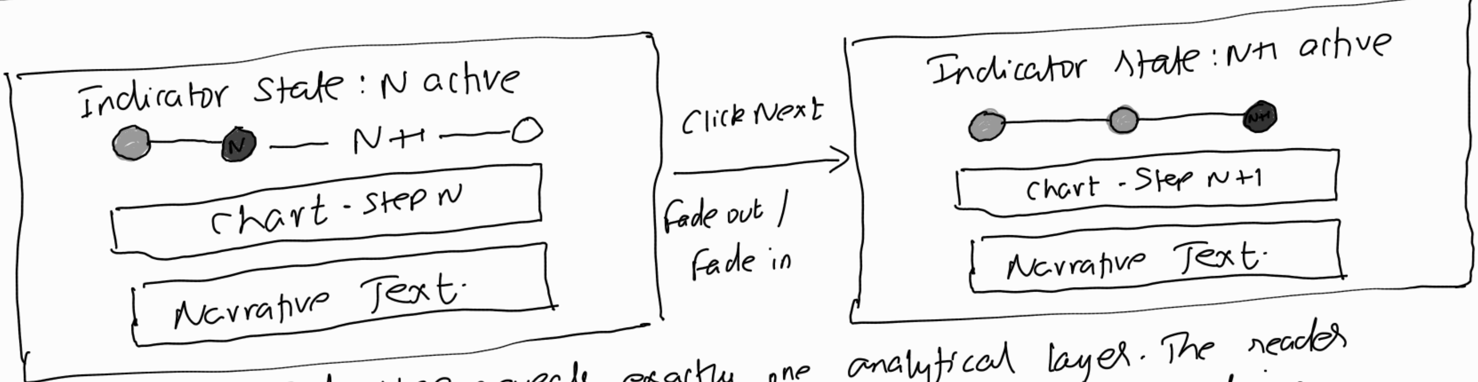
[B] Click "Next →" - content in [D] & [E] transitions to the next step & narrative. Step indicator [A] updates. On the final step the button disappears or resets.

[C] Click "← Previous" - returns to the prior step. [A] updates. Hidden when on step 1.

[A] Click a visited step circle - jumps directly to that completed step for review. Unvisited future circle remain greyed & unclickable.

[D] Hover on chart elements - tooltip appears showing exact values (percentage counts, LGA names). This is the only within step interaction.

FOCUS / PART I - Step Transition Mechanism



Each step reveals exactly one analytical layer. The reader cannot skip ahead but can revisit visited circles [A]. The closing step only makes sense once all prior evidence has been absorbed - this is what seperate Design A from B & C.

DISCUSSION

Pros:

- Sees evidence in exact order as intended - no confusion where to start.
- One chart, one explanation keeps things simple & focused.
- Opens with question. Closes with unknown. Clean narrative arc.
- Works well with non technical audiance like policymakers.
- Easy to implement.

Cons:

- Cant compare two charts - reader has to go back & forth.
- Feels passive - no filters, no exploration, just clicking next. Transport planners who are data savy might find it too handholdy
- Reader might lose interest
- Readers who already understand the context still have to sit through the opening framing step.
