

FIT5057 - Assignment 2 Marking Rubric

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
Team Interview						
2.1a Collaboration and Team Dynamics	Team members take initiative in leading or facilitating effective collaboration. It is evident that the team has worked on building trust and the team sustains psychological safety, and mutual respect. Demonstrates adaptive teamwork, empowering others and fostering shared ownership of outcomes.	Team members actively support team cohesion and contribute to a positive working environment. There appears to be no tension or they have resolved tension and encourage inclusive dialogue. Demonstrates a clear understanding of Agile team roles and adapts to team needs.	The team demonstrates reasonable collaboration; Team members communicate respectfully and acknowledge others' input. Shows growing awareness of team dynamics and shared responsibility.	Members participate in team discussion but with limited initiative, consistency or awareness of others. Communication is basic and may lack clarity or inclusiveness. Demonstrates some understanding of team roles but struggles to contribute meaningfully	The team shows minimal engagement with team roles; The collaboration and respect among team members are basic or superficial. Communication is poor or absent. Demonstrates little awareness of team roles, responsibilities, or shared goals.	Work provided does not yet demonstrate one of the levels in this criterion.
2.1b Problem Solving and Decision-Making	The team consistently demonstrates strategic and systems-level thinking, proactively identifying complex challenges and evaluating multiple solution paths. Team members integrate technical constraints, ethical considerations, and interpersonal dynamics to make well-reasoned, context-sensitive decisions. Their approach reflects foresight, adaptability, and a clear understanding of stakeholder impact.	The team reasonably analyses complex issues and proposes context-aware solutions. Balances technical constraints, team dynamics, and stakeholder needs in decision-making. Shows sound ethical judgment and adaptability.	The team identifies core challenges and proposes reasonable solutions. Demonstrates a structured approach to decision-making with some consideration of technical and interpersonal factors. Ethical reasoning may be present but underdeveloped.	The team members recognise basic aspects of the problem but offer limited or simplistic solutions. Decision-making is mostly reactive and lacks depth. Shows some awareness of relevant factors but does not integrate them effectively.	The team struggles to identify key issues or misinterprets the problem context. Decisions are reactive, poorly reasoned, or inappropriate for the scenario. Shows little awareness of technical, ethical, or interpersonal factors.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.1c Agile Practice Application	The team integrates Agile practices fluently and adapts them to context and demonstrates capacity for continuous improvement. All team members actively participate and engage in the conversation in an exceptionally positive and constructive way.	The team follows Agile practices in their team adaptation and transparency. Team members actively participate and engage in the conversation in a positive and constructive way.	The team shows awareness of Agile practices with some effectiveness; shows understanding of their role and the expectations. Team members participate and engage in the conversation. The interactions are positive.	The team refers to Agile practices but applies them inconsistently or superficially. Team members participate in the conversation. The interactions are positive.	The team misunderstands or misuses Agile concepts and principles; lacks awareness of their purpose.	Work provided does not yet demonstrate one of the levels in this criterion.
2.1d Reflection	Reflection is deep, critical, and highly insightful. Team members connect their experience to Agile principles such as transparency, adaptability, and continuous improvement. They demonstrate strong self-awareness and team awareness, articulating how their behaviours evolved and how they will apply these insights in future Agile contexts. Reflection shows maturity, ownership, and a commitment to growth.	Reflection is thoughtful and well-structured. Team members critically examine their collaboration, decision-making, and use of Agile practices. They identify lessons learned and areas for improvement, showing clear links to Agile values and team development.	Reflection includes relevant observations about team performance and Agile practices. Team members identify some strengths and challenges, and show emerging awareness of how their actions influenced outcomes.	Reflection is present but lacks depth. Team members describe what happened but offer limited insight into why it mattered or how it connects to Agile practices. Minimal discussion of personal or team growth.	Reflection is vague or superficial. Team members do not engage meaningfully with the experience or Agile principles. There is no evidence of learning, growth, or awareness of team dynamics.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
Scrum Board and Stand-Up Meeting						
2.2.1 Scrum Board set up (guide for preparation - no marks associated with preparation)	The Kanban/Scrum board reflects on all the necessary stages of workflow. The review includes well defined epics representing major project deliverables or objectives and detailed user stories (at least 2 user stories for each epic) specific to the project and written using industry-standard format. Use of MoSCoW method in prioritising requirements is clear. Each user story has 3-5 well-defined acceptance criteria that cover functionality, usability, and performance expectations.	The Kanban/Scrum board reflects on all the necessary stages of workflow. The review includes well defined epics representing major project deliverables or objectives and detailed user stories (at least 2 user stories for each epic) specific to the project and written in industry-standard format. Use of MoSCoW method in prioritising requirements is clear. Each user story has 3-5 acceptance criteria.	The Kanban/Scrum board reflects on all the necessary stages of workflow. The review includes epics representing project deliverables or objectives and user stories specific to the project and written in industry-standard format. Use of MoSCoW method in prioritising requirements is clear.	The Kanban/Scrum board reflects all stages of workflow. The review includes epics representing project deliverables or objectives and user stories specific to the project and written in industry-standard format.	The Kanban/Scrum board reflects stages of workflow. The review includes generic epics and user stories.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.2.2 Conduct a (Mock) Stand-Up Meeting	All team members actively participate and engage in the conversation in an exceptionally positive and constructive way. One of the team members has assumed the role of the scrum master and effectively facilitates the meeting, making sure that all members have equal opportunity to speak, respect each other, and are heard, and the meeting agenda is followed within the time limit. The Scrum Master discussed the Sprint Objectives from the scrum board Sprint Backlog and clearly indicated the assumed Sprint number and the specific day within the Sprint.	Team members actively participate and engage in the conversation in a positive and constructive way. One of the team members has assumed the role of the scrum master, facilitating the meeting, making sure that all members have equal opportunity to speak, respect each other, and are heard, and the meeting agenda is followed within the time limit. The Scrum Master discussed the Sprint Objectives from the scrum board Sprint Backlog and clearly indicated the assumed Sprint number and the specific day within the Sprint.	Team members participate and engage in the conversation. The interactions are positive. One of the team members has assumed the role of the scrum master, facilitating the meeting. All members have the opportunity to speak, respect each other, and are heard, and the meeting agenda is followed. The Scrum Master discussed the Sprint Objectives and clearly indicated the assumed Sprint number and the specific day within the Sprint.	Team members participate in the conversation. The interactions are positive. One of the team members has assumed the role of the scrum master. All members have the opportunity to speak, respect each other, and are heard, and the meeting agenda is followed.	Team members have a conversation. One of the team members represents the scrum master. Members could have the opportunity to speak.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.2.3 Demonstrate Task Progress Using the Scrum Board	During the demonstration, the scrum board is used to visually display * task status * task progress * completed acceptance criteria * transition of tasks across columns The Scrum board is professionally set up, is visually appealing and easy to use and track. The items of the sprint backlog are reasonably selected from the product backlog given the priorities, complexities and team capacity.	During the demonstration, the scrum board is used to visually display * task status * task progress * completed acceptance criteria * transition of tasks across columns The Scrum board is professionally set up, visually appealing and easy to use.	During the demonstration, the scrum board is used to visually display * task status * task progress * transition of tasks across columns The Scrum board is reasonably set up.	During demonstration, the scrum board is used to visually display * task status * task progress	During the demonstration, the Scrum Master or the team member uses a Scrum Board during the demonstration.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.3 Agile Deliverables and Artefacts						
2.3.1 Define Project Vision and Requirements (≤350 words total)	The project vision outlines an achievable scope that is well-suited for Agile delivery. It presents a clear and user-centric picture of what the end user will receive, articulating how the solution delivers value to specific users while aligning with the organisation's stated goals. The problem statement draws directly on user data, effectively highlighting key pain points from the user's perspective and explaining why these issues matter. It conveys clear empathy and presents a compelling case for action. The requirements are articulated in language that is easy for end users to understand. They are directly linked to identified user needs and are consistent with the personas described in the following section. Each requirement is concise, traceable to a pain point or need outlined in the problem statement, and grounded in user context.	The project vision outlines an achievable scope that is well-suited for Agile delivery. It presents a clear and user-centric picture of what the end user will receive, articulating how the solution delivers value to specific users while aligning with the organisation's stated goals. The problem statement draws directly on user data, effectively highlighting key pain points from the user's perspective and explaining why these issues matter. The requirements are articulated in language that is easy for end users to understand. They are directly linked to identified user needs and are consistent with the personas described in the following section.	The project vision outlines an achievable scope that is suited for Agile delivery. It presents a user-centric picture of what the end user will receive, articulating how the solution delivers value to specific users. The problem statement highlights key pain points from the user's perspective and explains why these issues matter. The requirements are articulated in language that is easy for end users to understand. They are directly linked to identified user needs.	The project vision presents a picture of what the end user will receive, articulating how the solution delivers value to specific users. The problem statement highlights key pain points from the user's perspective. The requirements are generally clear, some technical terms could be simplified to enhance understanding for end users.	The project vision provides a basic idea of what the end user will receive. The problem statement touches on limited user pain points. The requirements are generic.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.3.2 Scrum Persona - Develop four scrum personas (< 500 words in total)	Skillfully developed scrum personas for the project, clearly describing two individuals, each representing key stakeholder groups. The concise descriptions identify the individuals' key information, characteristics, intended use of the product, as well as their needs and goals. The descriptions reflect on the personas' frustrations and pain points and are clearly using an empathetic approach in understanding the personas' perspectives. The comprehensive information, along with the personas' names and generated photos, creates a realistic representation of a person. Behavioural insights are highly detailed, demonstrating a deep understanding of user actions, motivations, and decision-making patterns, with clear links to project relevance and user needs.	Adequately developed scrum personas for the project, describing two individuals, each representing key stakeholder groups. The descriptions identify the individuals' key information, characteristics, intended use of the product, needs and goals, as well as their frustrations and pain points. The information, along with the personas' names and generated photos, creates a realistic representation of a person. Behavioural insights are well-developed, showing a solid understanding of user behaviours, motivations, and tendencies, though some aspects could be explored further.	Reasonably developed scrum personas for the project, describing two individuals. The descriptions identify most of the individuals' key information, characteristics, intended use of the product, needs, frustrations and pain points. The information, along with the personas' names and generated photos, creates a reasonable representation of a person. Behavioural insights provide a reasonable overview of user actions and preferences.	Minimally developed scrum personas for the project, that includes two individuals. The descriptions identify some of the individuals' key information, characteristics, intended use of the product, frustrations, as well as their needs and goals. The information, along with the personas' names creates an idea of a person. Behavioural insights provide a basic understanding of user behaviours.	Minimally developed scrum personas for the project. The descriptions include basic information about the persona, their characteristics, intentions, frustrations, and needs. The information provided does not create any realistic ideas of a person. Behavioural insights are generic.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.3.3 Critical User Journey (<400 words)	Provided a well-considered journey map of the existing process that is both insightful and thorough, demonstrating a strong understanding of the user experience. All relevant user pain points and areas of friction are comprehensively identified, demonstrating a deep understanding of user challenges. The proposed improvements are highly innovative and transformational, aligned with the project goals, and demonstrating a deep understanding of user needs.	Provided a well-considered journey map of the existing process that is both insightful and thorough, demonstrating a strong understanding of the user experience. The user pain points and areas of friction are identified, reflecting on user challenges. The proposed improvements are transformational and aligned with the project goals.				Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
2.3.4 Agile Planning and Sprint Allocation						
Epics & Backlog that are consistent with the project vision (<500 words)	Expertly developed product backlog that is robust, clear and user-centred with two comprehensive epics that are elaborately aligned with the project requirements. The epics are skillfully developed and each is accompanied by the expected minimum user stories. Priorities are strategically set using one of the Agile prioritisation techniques, such as MoSCoW or the Kano model with well justified rationale. The detailed user stories are insightful, and follow correct formatting to articulate user perspectives and the personas created in Task 2.3.2. The user stories are skillfully written and INVEST-compliant	A reasonable product backlog that is clear and user-centred. The epics are adequately developed, each is accompanied by the expected minimum user stories, their alignment with the project requirements are clearly discussed. Priorities are set using a suitable Agile prioritisation technique such as MoSCoW or the Kano model with justified rationale. The user stories are effective, and follow correct formatting to show user perspectives and the personas created in Task 2.3.2. The user stories are and INVEST-compliant	A sufficient product backlog that is user-centred. The epics are well developed and each is accompanied by the expected minimum user stories, their alignment with the project requirements are implied. Priorities are set using a suitable Agile prioritisation technique. The user stories follow correct formatting to show user perspectives and the personas created in Task 2.3.2.	A product backlog that includes a few epics, each have the expected minimum user stories, all of which are relevant to the specific project context. Priorities are set and alignment with project requirements is mentioned. The user stories follow reasonable formatting to show user perspectives.	A product backlog with generic epics and user stories. Priorities are vague or may not follow any clear structure. The user stories minimally represent user perspectives.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
Strategic Sprint Allocation (<300 words)	Highly strategic and well-justified sprint allocation that expertly addresses epic priorities, dependencies and release phases. Pain point resolutions are skillfully prioritised in the sprint allocation, demonstrating a deep understanding of user needs and their urgencies. Comprehensive and well-reasoned justification for sprint allocation choices, with a thorough analysis of any trade-offs and their potential implications. Potential mid-project requirement changes and adaptability to their implications are identified and discussed. Team capacity is estimated using story points, with a well-reasoned capacity calculation that considers resource availability and sprint constraints.	Adequately justified sprint allocation that addresses epic priorities, dependencies and release phases. Pain point resolutions are reasonably prioritised in the sprint allocation, demonstrating a clear understanding of user needs. Sprint allocation choices are discussed, with some analysis of any trade-offs and their potential implications. Potential mid-project requirement changes and adaptability to them are discussed. Team capacity is effectively estimated using story points, with a reasonable approach to effort allocation, though capacity calculations could be more detailed.	A sprint allocation with sufficient justification that shows epic priorities, dependencies and release phases. Pain point resolutions are considered in the sprint allocation, indicating an understanding of user needs. Sprint allocation choices are summarised, with some considerations of trade-offs. Potential requirement changes are discussed.	A sprint allocation with justification that shows epic priorities and dependencies. Pain point resolutions have been identified in the sprint allocation. Sprint allocation choices are summarised, with some notions of trade-offs.	A sprint allocation with insufficient or unclear justification that may include some points about priorities and dependencies. There are notions of pain point resolutions mentioned. Sprint allocation choices are unclear or vague.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
Sprint 1 Execution Plan (<300 words)	Comprehensive and clearly defined Sprint 1 objective, demonstrating clear and meaningful connections to stakeholder needs and project vision. The sprint scope is extensive and itemised, providing a consistent list of epics, user stories, and acceptance criteria that cover functionality, usability, and performance expectations. The Definition of Done (DoD) is skillfully established to track and determine successful completion of the sprint. Buffer is well justified and potential risks, constraints and any contingencies are considered. The story points are realistically assigned to each user story.	Well defined Sprint 1 objective, demonstrating clear connections to stakeholder needs and project vision. The sprint scope is itemised, providing a consistent list of epics, user stories, and acceptance criteria that cover functionality, usability, and performance expectations The Definition of Done (DoD) is reasonably established to determine successful completion of the sprint. The selected user stories are realistic and include a buffer and consideration of some contingencies. The story points are realistically assigned to each user story.	Clearly defined Sprint 1 objective that shows connections to stakeholder needs and project vision. The sprint scope is itemised, including epics, user stories, and acceptance criteria. The Definition of Done (DoD) is explained. The selected user stories are realistic and include consideration of some contingencies. The story points are inline with user stories.	Sprint 1 objective that shows connections to stakeholder needs. The sprint scope includes epics, user stories, and acceptance criteria. The Definition of Done (DoD) is described. Includes some consideration of some contingencies. The story points show connections to user stories.	The Sprint 1 objective is generic. Sprint scope including epics, user stories, and acceptance criteria and the Definition of Done (DoD) are indicated.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
Reflective Writing						
3. Reflection on learning journey (<800 words)	The reflection is structured using a recognised reflective framework and demonstrates deep, critical engagement with the team's learning journey. The writing is authentic and genuine, offering thoughtful, honest insights into learning experiences throughout the teaching period. Project tasks, team activities, and the influence of unit support resources are critically evaluated with clarity and depth. The reflection explores changes, or consistent views about project management, supported by clear reasoning. There is a rich analysis of team members' strengths and weaknesses, including how the working styles influenced team collaboration and learning outcomes. A well-reasoned action plan and constructive feedback on unit design are included, showing	The reflection is structured using a recognised reflective framework and demonstrates critical engagement with the team's learning journey. The writing feels authentic and genuine, offering insights into learning experiences throughout the teaching period. Project tasks, team activities, and the influence of unit support resources are critically evaluated with clarity and depth. The reflection explores changes, or consistent views about project management. There is an analysis of team members' strengths and weaknesses, including how the working styles influenced team collaboration and learning outcomes. A well-reasoned action plan and constructive feedback on unit design are included.	The reflection demonstrates engagement and offers insights into the learning journey throughout the teaching period. Project tasks, team activities, and the influence of unit support resources are evaluated with clarity. The reflection explores changes, or consistent views about project management. There is an analysis of team members' strengths and weaknesses, including how the working styles influenced team collaboration and learning outcomes. An action plan and constructive feedback on unit design are included.	The reflection demonstrates engagement and offers insights into personal experiences throughout the teaching period. Project tasks, team activities, and the influence of unit support resources are evaluated. There is an analysis of team members' strengths and weaknesses. An action plan and constructive feedback on unit design are included.	The reflection demonstrates some engagement with the team's learning journey. The writing offers generic insights. A generic action plan and feedback on unit design are included.	Work provided does not yet demonstrate one of the levels in this criterion.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
	strong commitment to growth and continuous improvement.					
4. Completeness and correctness of statements; clarity of expressions	The submission contains clearly structured information that is focused on identifying and addressing a real problem with clear supporting information. The analysis demonstrates originality, creativity, and sophisticated thinking. The statements show an excellent understanding of the foundation of this unit and a strong capability to transform the theories into intellectual contributions.	The submission contains mostly structured information that identifies and addresses a real problem with supporting information. The analysis shows originality and creative thinking. The statements show a sound understanding of the foundation of this unit and a reasonable capability to transform the theories into intellectual contributions.	The submission contains some structured information that identifies a problem with some supporting information. The analysis raises some points, and the statements show a basic understanding of the foundation of this unit and the potential to transform the theories into real contributions.	The submission identifies a problem with a limited analysis. The statements show a marginal/limited understanding of the foundation of this unit.	The submission identifies a problem with a limited and unclear analysis. The statements do not show an understanding of the foundation of this unit.	Mostly incomplete and unclear.

Task	Excellent	Good	Moderate	Pass	Near Pass	Unrated
5. Use of suitable references and application of the APA style of referencing	Used a minimum of 7 references, 3 of which from peer reviewed academic journals or conference publications. The references are relevant to the project idea and client organisations' industry and are published within the past 10 years. The referencing style clearly follows the American Psychological Association (APA) style of referencing.	Used a minimum of 7 references, 3 of which from peer reviewed academic journals or conference publications. The references are relevant and are published in the past 10 years. The referencing style clearly follows the American Psychological Association (APA) style of referencing.	Used a minimum of 7 references, 1 of which from academic journals or conference publications. The references are relevant. The referencing style follows the American Psychological Association (APA) style of referencing	Used a minimum of 7 references, 1 of which from academic journals or conference publications. The referencing style follows the American Psychological Association (APA) style of referencing	Used limited references, some of which from academic journals or conference publications. The referencing style does not follow the APA style of referencing or is missing some essential elements.	No citations or minimal work done <u>If any of the references listed in the assignment are falsified, non-existent or include false information, this section will be marked Zero and could potentially be reported as a case of academic misconduct.</u>

*** Note:**

The differences between being *skillful* and *sufficient* (or adequate)–

Skillful: demonstrate expertise in the ability, knowledge, or skills to perform a task

Sufficient/adequate: demonstrate required and necessary ability, knowledge, or skill to perform a task
