

FIT5057 Project Management

Semester 2, 2025

Assignment Two

Due Dates

- **Part 1: Interview (25%)** – Week 11 Applied Class (13-17 October 2025)
- **Part 2: Team Demonstration (10%)** – Week 12 Applied Class (20-24 October 2025)
- **Part 3: Written Submission (65%)** – Week 14, Monday 3 November 2025, 11:55 PM

Value: 40% of overall unit assessment

Mode of Submission: In-class Interview (Part 1), In-Class Demonstration (Part 2), and Online via Moodle (Part 3)

OVERVIEW

Assignment 2 builds on the foundations established in Assignment 1 by moving from predictive project planning into Agile execution.

You will continue with the project selected in Assignment 1. Your team will now apply Agile practices to plan, deliver, and reflect on your work. You may adjust the scope to focus on a single technical deliverable.

This assignment requires you to demonstrate industry-standard Agile practices (Scrum board, stand-up meetings, sprint planning, personas, backlog refinement) and produce deliverables that align with PMI Agile Practice Guide and the Scrum Guide (2020).

LEARNING OBJECTIVES

Through this assignment you will:

- Apply Agile execution techniques, including Scrum board use and daily stand-ups.
- Develop Agile foundations: project vision, problem statement, requirements, personas, and optional user journeys.
- Plan and allocate sprints using epics, user stories, prioritisation, and estimation.
- Demonstrate and reflect on Agile teamwork, self-management, and professional development.
- Strengthen alignment with PMBOK 7 principles and Agile industry practices.

GETTING HELP

If you have any questions or concerns, you can:

- Consult with your TAs during applied classes and workshops;
- Attend consultation sessions (see Moodle for details);
- **Ask a question in the [EdForum](#).**

INTERVIEW INSTRUCTIONS

1. Each team is required to attend their interview during their allocated applied classes that occur in week 11.
2. All team members are expected to participate in the interview;
3. You will receive oral feedback after your interview, and your assessment of the task is entirely based on the interview.
4. You **can not** request short extensions for this task.

DEMONSTRATION INSTRUCTIONS

5. Each team is required to demonstrate their Scrum Board & Stand-Up Meeting, to their tutors during their allocated applied classes that occur in week 12.
6. All team members are expected to participate in the demonstrations;
7. You will receive oral feedback on your demonstration, and your assessment of the task is entirely based on the demonstration.
8. You **can not** request short extensions for this task.

SUBMISSION INSTRUCTIONS

- Your assignment must take the form of a single PDF document.
- You should name your document file as <<A2>>_<<team number>>.pdf, where <<A2>> is Assignment 2 and <<team number>> is the unique team number assigned to your team in Moodle. For example, a file name could be A2_0325.pdf, where the team number is '0325'.
- Short extensions are not applicable to this assignment
- **Draft files should be submitted otherwise the file will not be marked.**
- **One team member uploads the file into draft mode. ALL team members have to accept the student statement and submit for the file to be considered submitted.**

PLAGIARISM DECLARATION

When uploading your assignment on Moodle, you are required to accept the Student Statement (which includes a declaration that you have not plagiarised during the preparation of your assignment solution). You are required to ACCEPT the Student Statement; otherwise, you will not be able to submit your assignment electronically and your assignment will NOT be assessed.

GENERATIVE AI

AI & Generative AI tools may be used SELECTIVELY within this assessment. Where used, AI must be used responsibly, clearly documented and appropriately acknowledged (see [Learn HQ](#)).

Any work submitted for a mark must:

- represent a sincere demonstration of your human efforts, skills and subject knowledge that you will be accountable for.
- adhere to the guidelines for AI use set for the assessment task.
- reflect the University's commitment to academic integrity and ethical behaviour.

Inappropriate AI use and/or AI use without acknowledgement will be considered a breach of academic integrity.

LATE SUBMISSION

1. Submission must be made by the due date. Unless an extension or special consideration has been granted, or otherwise specified in the learning management system, students who submit an assessment task after the due date will receive a late-submission penalty of 5 percent of the available marks in that task. A further penalty of 5 percent of the available marks will be applied for each additional day (24-hour period), or part thereof, the assessment task is overdue.
2. If you cannot complete an assessment (due to exceptional circumstances beyond your control), you may be eligible for a short extension or special consideration. A short extension is two calendar days and is available once for each eligible assessment. The first short extension for a unit will be granted without a reason given. All subsequent extensions require a reason when the application is submitted. Special consideration is a longer extension (for more than two days). Eligible students must supply a reason and supporting documentation.
3. For more details of the Special Consideration procedure and rules, and how to apply, visit: <https://www.monash.edu/students/admin/exams/changes/special-consideration>

1. Assignment overview

Assignment deliverables, weight and related teaching weeks in the semester

Project Phase	Assignment task	Deliverable	Expected due date	Weight	Purpose
Interview	Task 2.1	Scenario based interview, reflections on collaboration	Week 11 Applied	25%	Stakeholder communications, reflective and critical thinking
Team Demonstration	Task 2.2	Scrum Board & Stand-Up Meeting Demo	Week 12 Applied	10%	Simulate real-world Agile ceremonies
Agile Foundations	Task 2.3.1 Task 2.3.2 Task 2.3.3	Project Vision, Problem, Requirements, Personas, Journey map	Week 14 (In the Written Submission)	20%	Establish Agile project foundation
Agile Planning	Task 2.3.4	Epics, User Stories, Prioritisation, Sprint Allocation, Sprint 1 Plan	Week 14 (In the Written Submission)	25%	Plan adaptive delivery
Reflection	Task 3	Reflection on Learning Journey	Week 14 (In the Written Submission)	10%	Evaluate Agile practice and professional growth
Wrap-up and Compiling the report	Tasks 4 & 5	Full report including all tasks and deliverables, ensuring completeness, Clarity, and accurate Referencing	Week 14 (In the Written Submission)	55% for the written tasks 10% for Tasks 4&5	Ensure quality and integrity of report

2. Context

Assignment 2 builds on the foundations established in Assignment 1 by moving into Agile execution. The skills learned in Assignment 1, such as risk identification and stakeholder alignment, will now be applied in a dynamic, Agile environment.

All teams are expected to continue their collaboration. We do not expect changes in the team arrangements. In exceptional circumstances, you may be allowed to depart the team and continue working individually. This change however, is not recommended as Agile practices are based on collaboration.

If you are completing the assignment individually, you must still complete all tasks. Where there is a need for team collaboration, you should reflect on what the process will be having a team. If in doubt, consult with your tutors during your applied classes.

2. Assignment Breakdown

2.1 Scenario-based Interview

This interview aims to simulate a real-world Agile team experience, where you'll be asked to respond to a complex situation involving collaboration, technical challenges, and stakeholder expectations. The goal is not just to test your knowledge of Agile practices, but to see how you apply them in a dynamic, team-based environment.

The scenario will present you with complex and ambiguous challenges, such as technical blockers, stakeholder pressure, or interpersonal conflict. You'll need to analyse the situation, make decisions under pressure, and balance priorities. This is an opportunity to show your problem-solving skills and your ability to think critically in uncertain conditions.

The key learning objectives are to

- Apply Agile Practices in Realistic Contexts;
- Collaborate Effectively in Teams;
- Respond to Complex, Ambiguous Challenges;
- Reflect Critically on Agile Experience;
- Demonstrate Professional and Ethical Reasoning;
- Make decisions that balance stakeholder needs, team wellbeing, and Agile values.

2.1.1 Interview Context

You are part of a Scrum team working on a real-world software development project. The team has followed a **hybrid methodology**—starting with a Waterfall-style planning phase and have now transitioned into **Agile execution** using Scrum.

You will participate in a **scenario-based interview** simulating a workplace situation during the execution phase in your **Applied 11**. The scenario will involve challenges typical of Agile teams, such as:

- Changing requirements
- Team dynamics and collaboration
- Stakeholder expectations
- Technical constraints

2.1.2 Your Role

You will be asked to respond as a member of the Scrum team. You may be assigned a specific role (e.g., developer, Scrum Master, UX designer) or asked to reflect from your own perspective.

2.1.3 Preparation for the interview - before the applied class

- Review key Agile practices: **Scrum Board, Daily Scrum, Sprint Retrospective, Backlog Refinement**
- Reflect on your experience from Assignment 1 and how Agile practices influenced your work
- Be ready to discuss how you collaborate in teams, handle conflict, and adapt under pressure

2.1.4 The Interview - During the applied class

Your tutors will organise the interviews and role play as stakeholders. You will be informed about the scenario shortly before your interview starts. Your tutors (stakeholders) will ask you questions based on the scenario to assess:

- Your ability to **analyse and respond** to a complex scenario
- How well you apply **Agile principles and practices**
- Your **communication, ethical reasoning, and teamwork strategies**

2.1.5 Reflection

At the end of the interview, you will be asked to reflect on your learning journey. Sample questions include

1. What did your team do well in collaborating on Agile tasks?
2. What was your biggest teamwork challenge and how did you handle it?
3. How did Agile practices (Scrum board, Daily Scrum, retrospectives) change the way you worked compared to Assignment 1?

2.2 Team Demonstration - Scrum Board and Stand-Up Meeting

This task simulates real-world Agile team practices, requiring teams to create and manage a Scrum Board and perform a stand-up meeting. Teams will demonstrate their ability to organise tasks, prioritise effectively, and address blockers, reflecting industry Agile workflows.

2.2.1 Setting Up a Scrum Board and

Step 1. prior to your demonstration: Set Up a Scrum Board

A Scrum Board is a core tool in Agile workflows, used to track tasks visually and collaboratively. For this assignment, you will create a Scrum Board using tools widely adopted in industry.

- **Choose a Scrum Board Tool:**
 - **Digital Tools:** Use Trello, Jira, or Asana popular tools in Agile project management for tracking progress, managing tasks, and collaborating in real time.
 - **Physical Board:** If digital options are unavailable, use a whiteboard with sticky notes to create a physical Scrum Board for in-class demonstrations.
- **Create Columns to Reflect Workflow Stages** (To ensure consistent, industry-aligned Scrum Boards across teams, require a minimum standard board layout):
 - **Backlog:** Tasks that are identified but not yet assigned to a sprint.
 - **To Do:** Tasks that are planned for the current sprint and ready to be worked on.
 - **In Progress:** Tasks actively being worked on by team members.
 - **Blocked:** Tasks currently stalled due to obstacles, dependencies, or other issues.
 - **Done:** Completed tasks that meet the Acceptance Criteria.
- **Create your Product Backlog:**
 - Add **8 Epics (for teams of 3-4 students)** representing major project deliverables or objectives aligned with project goals.
 - Note: If your team has less than 3 members, you need to add 5 Epics.
 - Add **16 User Stories** that are associated with the epics, written in industry-standard format:

“As a [user type], I want to [action], so that [benefit].”

 - Note: If your team has less than 3 members, you should add 10 User Stories.
 - Use **MoSCoW Prioritisation** to categorise tasks:
 - **Must Have:** Essential tasks that must be completed for project success.
 - **Should Have:** Important tasks that add significant value but are not critical.
 - **Could Have:** Tasks that are desirable but not necessary.
 - **Won't Have:** Tasks deferred for future consideration.
 - Add **acceptance criteria** to your user stories
 - Enhance user stories by defining 3-5 clear acceptance criteria to ensure they meet requirements and are testable.
 - Write clear, measurable, and testable acceptance criteria.
 - Use formats like Given-When-Then (BDD) or simple bullet points.
 - Ensure criteria cover functionality, usability, and performance expectations.
- **Task Management of the Scrum Board**
 - Prepare your sprint backlog considering the priorities, story points, complexities and team's capacity .
 - Assign tasks to individual team members, simulating real-world Agile workflows where accountability and ownership are critical for project success.

2.2.2 Conducting a Stand-Up Meeting in Week 12 Applied class

The Daily Stand-Up Meeting is a short, time-boxed Agile ceremony aimed at aligning the team and resolving issues promptly. For this assignment, you will simulate this process in a mock meeting. Your tutor is going to be an observer during the demonstration. **One of the team members will play the role of a Scrum Master.**

- **Meeting Agenda:**

The Scrum Master will initiate the meeting by first indicating the Sprint Objectives from the Scrum board and Sprint Backlog and clearly indicate the assumed Sprint number and the specific day within the Sprint (for example, this is day 3 of Sprint #2)

Each team member must address the following questions:

- *What have I accomplished since the last meeting?*
- *What am I working on today?*
- *What blockers are preventing me from making progress?*

- **Scrum Master's Role:**

- Facilitate the meeting, ensuring all team members actively participate.
- Identify and record blockers (e.g., technical issues, resource constraints).
- Propose immediate actions or escalation strategies to resolve blockers, reflecting the problem-solving responsibilities of a Scrum Master in industry.

- Use the Scrum Board during the stand-up meeting to visually track and communicate task status and progress.

- **Task Movement:**

- Show how tasks transition between columns (e.g., from "To Do" to "In Progress" or "Blocked" to "Done").
- Use clear labels, colour codes, or tags to enhance task visibility and identify task owners.

- **Highlight Changes and Adaptability:**

- Explain adjustments to priorities, timelines, or sprint scope based on blockers or feedback.
- Demonstrate how the team responds to changing requirements or unforeseen issues, reflecting Agile's adaptive and iterative nature.

2.2.3 Demonstration Expectation

- **Time constraint: 10 minutes for team of 4; 8 minutes for team of 3; 6 minutes for all other teams**

- **Introduction of the team and the projects (< 1 minute):** Introduce your team and the projects to provide context to the standup meeting. Indicate which phase/sprint you are currently in.
- **Meeting Agenda (2 minutes per team member, facilitated by the Scrum Master):** Each team member must present one user story that is assigned to them and simulate real-time backlog refinement by
 - Explaining the context and priority of the user story;
 - Justifying the current placement of the user story in the scrum board (e.g. To Do, In Progress, Blocked, or Done column) and whether it needs to move;
 - If moved (e.g. from To Do to Blocked), explain why and what action was taken;
 - And briefly engaging with the team or tutor if clarification is needed
- **Meeting Closure (1 minute):** Scrum Master to conclude the meeting by summarising
 - Key blockers and decisions made
 - Any sprint or task adjustments
 - End of stand-up

Notes:

- **Visual Aids:** Slides are not required. Please use the Scrum Board tool during the demonstration
- **In the written Submission:**

Please submit a screenshot of the Scrum Board you used in the demonstration. (an overview of the team scrum board is sufficient)

2.3 Agile Deliverables and Artefacts

2.3.1 Define Project Vision and Requirements (≤350 words total)

Write a clear vision statement describing your project's purpose, long-term goals, and stakeholder impact.

- Define the problem using the format:

“The problem of [X] affects [Y]. The impact is [Z].”

- List 6 requirements linked to user needs and project goals. Include at least 3 functional and 2 non-functional requirements. The requirements should be linked to project goals.

2.3.2 Scrum Personas: Create Four Personas per Team (≤500 words total). Each persona must include:

- Name and background
- Goals and needs
- Frustrations
- Behavioural insights
- Briefly explain how each persona shaped your requirements or features (≤350 words)

2.3.3 Critical User Journey (<400 words)

- Choose one persona.
- Map their journey using this structure:

User action → Pain point or question → Emotion → Opportunity or solution

2.3.4 Agile Planning and Sprint Allocation

Objective Break down and plan Agile delivery.

- Epics & Backlog that are consistent with the project vision (<500 words). Eight epics minimum, each broken into at least 4 user stories that are evidently INVEST-compliant.
 - Note: If your team has less than 3 members, you need to add 5 Epics.
- Prioritisation of the backlog is using MoSCoW or Kano, with justification.
- Strategic sprint Allocation (<300 words, ±10%). Plan 4 sprints (2 weeks default sprint duration) and include capacity calculations.
- Release Phase: Identify Release 1 (must-have vertical slice).
- Sprint 1 Plan (<300 words, ±10%): Sprint Goal, Deliverables, Acceptance Criteria, Dependencies, Definition of Done (full form, not only “DoD”).

3. Reflection on your Learning Journey (Up to 800 words in total)

Reflect critically on your Agile teamwork experience and your own professional growth. Demonstrate awareness of how your team worked together, how you contributed, and how you will apply these lessons to future projects. Include

- Team activities: Describe how your team collaborated in Agile tasks (Scrum board, stand-ups, backlog refinement, sprint planning).
- Strengths: Identify what your team did well (communication, conflict resolution, adapting

to change).

- Challenges: Identify what was difficult and how you handled it.
- Learning: What Agile practices helped your teamwork most? What would you do differently next time?
- Frameworks: Optionally use Tuckman's Team Development Model (Forming–Storming–Norming–Performing) or similar to frame your reflection.
- Your experience and reflection on week 11 interview and week 12 demonstration.

You can Use the following prompts:

- What aspects of teamwork helped you succeed?
- What aspects of teamwork hindered your progress?
- How did your team feedback affect your learning?
- How did applying predictive methods in Assignment 1 and adaptive methods in Assignment 2 change your understanding of project management?
- What skills did you gain about team collaboration that you can apply in industry (e.g., stand-ups, backlog grooming, retrospectives)?
- Did you use any of your deliverables in assignment 1 for your sprint planning? (e.g. the risk register, stakeholder analysis, quality management plan)
- Key takeaways about teamwork and Agile practice.
- How your mindset toward project management roles has evolved.
- Specific goals for improving teamwork and leadership skills in future units or professional roles.
- What practices you will keep, change, or try next time.

4. Completeness and correctness of statements; clarity of expressions

The individual report should contain clearly structured information that is focused on identifying and addressing all requirements of the deliverable with clear supporting information. The report should be well presented and include key elements of a succinct report such as a title or cover page, a table of contents, page numbers, appendices (if applicable), etc.

All sections of the report and the analyses and discussions are expected to demonstrate originality, creativity, and sophisticated thinking. The statements show an excellent understanding of the foundation of the unit and a strong capability to transform the theories into intellectual contributions.

5. Use of references

Students are expected to search for relevant extra readings and draw on suitable literature from academic publications as well as practitioner outlets. All sources of information must be fully and appropriately acknowledged using in-text citation and reference list. Use at least 7 references. The reference section should use the American Psychological Association (APA) style of referencing.
