

Assignment 2

This assignment uses the Monash University standard grading schema, see: <https://publicpolicydms.monash.edu/Monash/documents/1935755>

N (Fail)	P (Pass)	C (Credit)	D (Distinction)	HD (High Distinction)
Lack of satisfactory demonstration of fundamental knowledge, skills and expected attributes.	Demonstration of fundamental knowledge, skills and attributes at a satisfactory level.	Demonstration of fundamental knowledge, skills and attributes at a proficient level, showing fluency in concepts	Demonstration of extended knowledge, skills and attributes at a superior level, showing fluency and emerging originality and integration of concepts	Demonstration of extended knowledge, skills and attributes at an exceptional level, showing fluency, originality and integration of concepts.
0-49%	50-59%	60-69%	70-79%	80-100%

Task A: "Descriptive Analysis of Kluster Conditions" (13.5 marks / 30%)

- **Research Question**
 - Clear, specific, and testable research question
 - Appropriately focused on differences between the four experimental conditions
 - Relevant to participant engagement and interaction patterns in the Kluster system
 - Demonstrates understanding of the study context
- **Descriptive Metrics**
 - Selection of appropriate descriptive metrics that reveal meaningful differences across conditions
 - Correct calculation of metrics for all four conditions
 - Clear presentation of variables/fields used from the dataset
 - Appropriate justification for why these metrics were chosen
 - Metrics are relevant to the research question
- **Visualization**
 - Appropriate chart type for the data and research question
 - A clear comparison of all four experimental conditions
 - Fully annotated (title, axis labels, legend, units)
 - Visually clear and easy to interpret
 - Professional presentation quality
- **Narrative Description**
 - Clear connection between findings and the research question
 - Effective integration of both metrics and visualisation in the narrative
 - Thoughtful discussion of what the differences/similarities suggest about participant behaviour

- Connection to implications for designing better collaboration systems
- Coherent and well-structured writing

Task B: "Inferential Analysis of Communication Patterns" (13.5 marks / 30%)

- **Hypothesis Formulation**
 - A clear formulation and expression of the research hypothesis
 - The hypothesis is testable using inferential statistics
 - Realistic to test with the provided data
 - Relevant to communication patterns in Kluster
 - The null hypothesis is correctly stated
- **Variable Identification**
 - Independent variable(s) correctly identified
 - Dependent variable(s) correctly identified
 - Relevant confounding variables have been identified
 - A clear understanding of the relationships between variables
- **Statistical Approach**
 - Appropriate statistical test(s) selected for the hypothesis and data
 - Clear articulation of assumptions about the data (normality, independence, scale of measurement, etc.)
 - Strong justification for why the chosen test(s) are appropriate
 - Demonstrates understanding of statistical concepts
- **Statistical Results and Interpretation**
 - Correct execution of the statistical test(s)
 - Accurate presentation of test statistic(s) and p-value(s)
 - Correct interpretation of results (reject or fail to reject null hypothesis)
 - Clear explanation of what the results mean in practical terms for understanding communication in Kluster
 - Discussion of findings demonstrates critical thinking

Task C: "Design for Multilingual Collaboration" (18 marks / 40%)

- **Theme Synthesis and Design Focus**
 - Clear identification and synthesis of key themes from the user experience quotes
 - Themes are relevant to multilingual collaboration challenges
 - Strong connection between identified themes and chosen design focus
 - A clearly annotated Miro board from which the affinity diagramming process can be understood.

- **Design Rationale**
 - Clear explanation of how design addresses needs and challenges from user quotes
 - Strong justification for specific design choices
 - Thoughtful discussion of what communication patterns or collaboration behaviours the design aims to support
 - Consideration of the multilingual context is evident throughout
 - Honest discussion of potential limitations or trade-offs
 - Well-structured and coherent writing
 - Strong integration of evidence (quotes) with design decisions
 - Demonstrates critical thinking and design reasoning
 - A clearly annotated Miro board, based on which the two final designs and the brainstorming process can be understood.
