[A] Victorian Education Investment & Travel Equity

Data Source →

[B3] Filter Panel

[B1] Trip Purpose
Dropdown
Work/Edu/Both

[B2] ISRD Range Slider
Slide 2-10
2 ————— 10

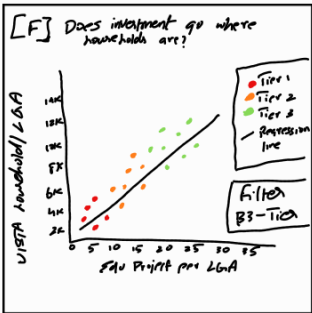

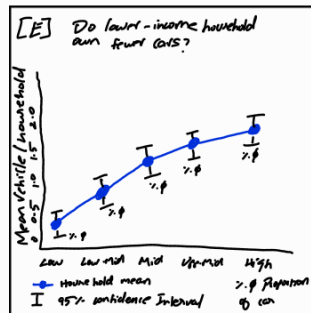

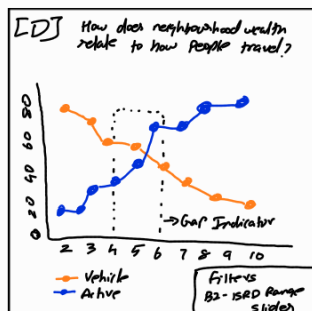

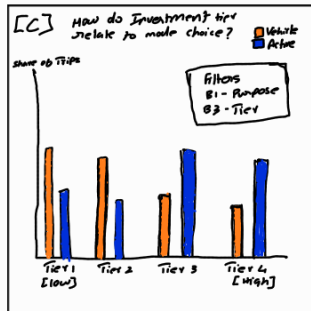

[B3] Investment Tier

- ☐ None
- ☐ Low
- ☐ Medium
- ☐ High

(All checked by Default)

Filter Scope

- B1 → [C] only
- B2 → [D] only
- B3 → [C] + [F]

[G3] Δ Vista coverage gap: 29 Victorian LGAs with education investment not covered by travel survey. Analysis restricted to 33 overlapping LGAs.

Title - Design B - Dashboard
Author - Bharath Ann Ganthimani
Date - 13/05/2028
Sheet No - Sheet #3
Description - Interactive narrative visualization communicating findings about educational infrastructure investment socioeconomic equity & household travel behaviour in Victoria to policy makers & transport planners.

COMPONENTS / OPERATIONS

[B1] Select trip purpose → [C] bars update to show based on trip purpose. [D] [E] are unchanged.

[B2] Drag ISRD slider to specific range → [D] dots on the line for rankings change accordingly - focus remains on selected range. [C] [E] [F] are unchanged.

[B3] Uncheck from investment tier → [C] remove selected bars; [F] selectively fades. [D] [E] remains unchanged.

Hover over any bar in [C] → Tooltip: mode group, investment tier, trip purpose, % share, n trip.

Hover over any point in [F] → Tooltip: LGA name, project cost, household count, investment tier.

Click [A] data source link → opens vista dataset URL in new browser.

FOCUS / PART 1 - Filter Coordination Flow.

[C] Grouped bars
mode x Invest. Tier

B1: trip purpose → updates [C] bars only

[B3] Filter Panel
B1 B2 B3

B2: ISRD sliders → gives [D] deciles

[D] Dot plot
ISRD x mode share

[E] Dot plot + CI
income x car ownership

[E]: B1 + B2 no effect (household-level data)

B3: tier filter → [C] + [F] both update

[F] Scatter
project x LGA.

Part 1 coordination note:

[B1] → [C] only (trip purpose)
[B2] → [D] only (ISRD range)
[E] is also not affected by [B2]
[B3] → [C] & [F] (Investment tier)
[E] (household level) & [F] (LGA level) are not affected by trip purpose filter [B1]. [F] is only affected by [B3].

DISCUSSION

PRO

- Policy maker who knows the domain can go directly to the panel they want without sifting through guided sequence from design A.
- Filtering reduced noise without removing content.

CONS

- 4 charts & 1 filter sidebar requires orientation time.
- There is no narrative thread so a policymaker who doesn't already know the question gets no guidance.
- VISTA coverage gap is easy to miss in a faster trip rather than framing it as a finding.
- [C] & [D] overlap conceptually (both show mode share) but from different angles which could be perceived as redundant.
