

The Rubric for A2

A2 is marked out of 40 across four tasks. There are no hurdles. The Generative AI Tools Declaration is a required deliverable and contributes 2 marks.

Task	Weight
Task 1 — Data Cleansing	18 / 40
Task 2 — Data Reshaping	6 / 40
Task 3 — Presentation	14 / 40
Task 4 — AI Declaration	2 / 40
Total	40 / 40

Task 1 — Data Cleansing (18 / 40)

Marks below are absolute marks out of the 18 allocated to Task 1.

Output structure compliance (gating, applies regardless of grade) — Output files must be parsable, follow the pre-defined structure, and use the same column names as the spec. Any deviation (unparsable file, renamed/missing/extra columns, wrong row identifiers) will cause the affected output file to fail the auto-marker check and receive 0 marks for that file (other files are unaffected).

Criterion	Marks	HD	D	C	P	F
Dirty Data fixes	7.5 / 18	90%+ of the errors are fixed accurately	75%–89% fixed accurately	60%–74% fixed accurately	50%–59% fixed accurately	0%–49% fixed accurately
Outliers removal	2.5 / 18	90%+ of the outliers are removed	75%–89% removed	60%–74% removed	50%–59% removed	0%–49% removed
Missing value imputation	3.5 / 18	90%+ of the missing values are imputed correctly	75%–89% imputed correctly	60%–74% imputed correctly	50%–59% imputed correctly	0%–49% imputed correctly
Methodology	3 / 18	All required steps are present, well justified, and produce HD-level output. No or only minor errors in approach.	All required steps present; produces output above C level; minor gaps in justification.	Fair solution; up to 3 key steps are missing or incorrect.	Poor solution; 4+ key steps missing or incorrect.	Only one or two steps demonstrated; cannot achieve a correct output.
Documentation	1.5 / 18	Proper sections and subsections (introduction, methodology, conclusion, ...). Methodology clearly explained; code is well commented.	Proper sectioning; methodology fairly explained; code fairly commented. Room for improvement.	Some sectioning but not well organised. Explanation limited; code commented.	Some sectioning but not well organised. Explanation poor; code commented.	Poor or no sectioning. Explanation poor; code poorly commented.

Sub-totals: Output 13.5 / 18, Methodology 3 / 18, Documentation 1.5 / 18.

Note: Both non-fixed errors and newly introduced errors are penalised. If, while fixing one anomaly (dirty / missing / outlier), you introduce another error, you lose marks accordingly.

Task 2 — Data Reshaping (6 / 40)

Marks below are absolute marks out of the 6 allocated to Task 2. The aim is to prepare the data for a linear regression model, not to build the final model. Simple linear-regression diagnostics (R^2 , residuals, etc.) are accepted as evidence for evaluating transformation suitability, but they are one option among several — distribution/skewness checks, scale comparisons, and correlation/linearity inspections are equally valid.

Criterion	Marks	HD	D	C	P	F
Exploratory analysis of reshaping methods	4.5 / 6	Different methods are well analysed; effects shown in detail. Uses appropriate evidence to evaluate transformation suitability — e.g. scale comparison, distribution/skewness, correlation or linearity with the target, and (optionally) simple linear-regression diagnostics — with detailed explanations. A convincing recommendation is given.	Methods reasonably analysed; effects demonstrated. Multiple forms of evidence used with detailed explanation. A reasonable recommendation is given.	Methods fairly analysed; effects demonstrated. Limited evidence with little explanation. A recommendation is given.	Methods poorly analysed; very limited evidence considered; recommendation is rushed.	Methods badly analysed; effects not demonstrated; no meaningful evidence; recommendation is rushed or missing.
Documentation	1.5 / 6	Proper sections and subsections; clear narrative of EDA → transformation choices → conclusion. Code well commented.	Proper sectioning; explanation fair. Code fairly commented. Room for improvement.	Some sectioning but not well organised. Explanation limited; code commented.	Some sectioning but not well organised. Explanation poor; code commented.	Poor or no sectioning. Explanation poor; code poorly commented.

Task 3 — Presentation (14 / 40)

The presentation is an in-person group session in Week 15, scheduled on Monday 15 June and Tuesday 16 June 2026. Each group has approximately 25 minutes: 15 minutes for presentation and 10 minutes for Q&A. All members must attend, sign the attendance sheet, present part of the work, and answer at least one question. The session has two parts:

1. The group presents the content of their A2 work (methodology, decisions, results) — scored on quality.
2. The TA then asks Q&A to probe understanding.

Part A — Content Presentation Quality (9 marks)

Marks the substance and quality of how the group walks the TA through their own A2 submission. The TA scores each criterion against the descriptors below.

Criterion	Marks	HD	D	C	P	F (0)
Coverage & completeness	2.5	Presentation covers all required components (Task 1 dirty / missing / outlier handling and Task 2 reshaping) with the right level of detail; no significant gaps.	Covers all components; minor gaps in depth.	Covers most components; one part noticeably thin.	Covers only part of the work; major gaps.	Substantial parts of the work are not presented at all.
Depth & accuracy of methodology explanation	4	Methodology is explained accurately end-to-end with clear justifications (why each detection / imputation / transformation was chosen, what alternatives were rejected, how parameters were set). Demonstrates strong ownership of the work.	Methodology explained accurately; justifications present but not always rigorous.	Methodology explained at a high level only; some claims unsupported or partially incorrect.	Significant inaccuracies or hand-waving; cannot justify key choices.	Methodology not explained or substantively wrong; no evidence of ownership.
Clarity & structure of delivery	1.5	Logical narrative (context → approach → results), clean visuals/notebook navigation, on-topic and concise.	Mostly clear; minor structural issues.	Some structure but occasionally hard to follow.	Disorganised; reader has to fill in the narrative.	No structure; cannot follow what was done.
All members substantively participate	1	All members present material and explain their own contributions.	All members speak; one or more members are noticeably more passive.	All members speak only briefly.	One member dominates almost entirely.	Only one member presents / contributes.

Part B — Q&A (5 marks)

After the presentation, the TA asks five targeted questions (each member should expect to answer some). Each question is scored independently.

Question (covers)	Yes (1)	Partial (0.5)	No (0)
-------------------	---------	---------------	--------

Q1 — Task 1 dirty-data detection & fixing approach	Correctly explains the detection logic and the fix, with justification linked to the data observed.	Partially correct (e.g., describes the fix but cannot justify, or vice versa).	Cannot answer / answer is incorrect.
Q2 — Task 1 missing-value imputation choice	Correctly explains which imputation method(s) were chosen and why they best suit the data.	Partial reasoning, or method explained but not justified.	Cannot answer / answer is incorrect.
Q3 — Task 1 outlier detection & justification	Correctly explains the outlier criterion (only on delivery fee), how it was applied, and why.	Partial reasoning.	Cannot answer / answer is incorrect.
Q4 — Task 2 reshaping decisions	Correctly explains the EDA findings, the chosen scaling/transformation, and how it improves the suitability of the data for a linear-regression model.	Partial reasoning.	Cannot answer / answer is incorrect.
Q5 — Specific code / function walkthrough	Can navigate to the requested function/cell, explain what it does line-by-line, and discuss alternatives.	Can locate the code but cannot fully explain it.	Cannot locate or explain the code.

Non-attendance / inability to demonstrate the work results in losing the marks for any component not demonstrated (up to the full 14 marks of the presentation). Personal nervousness, language anxiety, forgetting to attend, or forgetting your own solution are not grounds for re-marking.

Task 4 — Generative AI Tools Declaration (2 / 40)

The AI Tools Declaration is a required submission deliverable and an academic integrity record.

Criterion	Marks	Full marks	Partial	No marks
Declaration form completion	1 / 2	Declaration form is correctly filled in, signed by all members, and submitted as Group<group_id>_ass2_task3.pdf.	Form is submitted but has minor omissions or formatting issues.	Form is missing or substantially incomplete.
AI records, if applicable	1 / 2	If AI was used, complete English conversation logs are attached as Group<group_id>_AI_Records.docx/pdf/txt; if AI was not used, the declaration clearly states this.	Records are provided but incomplete, not clearly organised, or not fully in English.	Required records are missing, or the declaration does not clearly state whether AI was used.

Missing or incomplete declarations / AI records may also be treated as a submission completeness issue and may trigger an academic integrity review under the standard Monash process.
